

ALLOY WHEEL SHOTBLASTING PREPARATION SOLUTIONS FROM AYCE

The all **NEW “Wheelmaster”** is the perfect machine for the effective, timely and safe etching of alloy wheels in garage and specialist wheel repair environments.
AN ALLOY WHEEL CAN BE PREPARED FOR PAINT IN LESS THAN 3 MINUTES
£POA

FEATURE

Compact Cabinet - with large single opening door - available in pressure or suction feed

Tilting turntable, stands vertical out of the blast cabinet

Central spindle with wheel locator

Blast Nozzle/Gun and Air Wash Tidy Rack

Large, angled cabinet viewing window plus high intensity, internally located fluorescent cabinet lighting

Plastic anti frosting sheet used to protect toughened glass viewing window

Pneumatic safety interlocks on all doors

Extra large armhole fittings

Full width foot pedal operation

Modern dust collector unit including filter cartridge

Pressure feed systems also available

BENEFIT

Doesn't take up valuable floor space - yet large enough for 4 x 4 alloys

Machine capable of being loaded by mechanical lifting - so avoiding heavy manual lifting - H&S lifting regulations

Fast and easy load/unload of wheels, nylon locator holds wheel secure

Easy to reach blast nozzle and air wash, stores safely out of the way when loading and unloading wheels

Excellent visibility within cabinet during blasting without harsh glare or shadows through the etched surface

More economical than replacing complete window when viewing becomes difficult

Prevents accidental use of blast gun when loading/unloading components.

Allows maximum flexibility of arm movement to manipulate the blast nozzle

Improved operation comfort during blasting

Efficient filtration, ease of maintenance and no media leaks out of cabinet into work space

For rapid blasting or heavy duty applications
