

# XMAS OFFERS FROM AYCE SYSTEMS

## PLASWELD-RITE

AYCE SYSTEMS PLAS-WELDRITE is an easy to use system for the repair of splits on bumpers and plastic components that are repairable with heat.

Incorporating a 240-volt temperature controlled iron and shaped tip, repairs are affected by "burying" a reinforcing fine steel mesh in to the damaged component. Any voids are filled with a universal filler rod, also applied with the iron. Repair can be sanded and filled for completion in the normal manner.

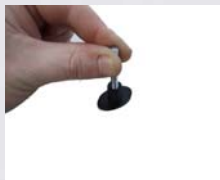

LAUNCH PRICE ~~£150.00~~ **£75.00**

## EASI-DENTRITE

AYCE SYSTEMS EASI-DENTRITE is a simple to use glue puller for the removal of small shallow dents that are inaccessible using conventional PDR tools. Repairs are carried out by attaching the relevant glue pulling tab to the panel using our high strength hot melt glue. Allow to cool for approximately 30 seconds. Place bridge over thread of foot and attach pressure screw. Tighten down pressure screw until firm resistance is felt. Continue to tighten screw in small steps, allowing short intervals between each turn, until the dent is removed. A high spot remover is also included to finish off any imperfections.

LAUNCH PRICE ~~£150.00~~ **£75.00**
